Design Explanation

Your design style is:

- Modern
- Minimalist
- Scandinavian
- Loft
- Industrial

After I analyze your requests, I decided these for your project:

- Put the limit of color scheme
- TV area with storage space
- Comfy but elegant look
- Making empty spaces for your pet
- Dining area for quality family time

About Floor Plan

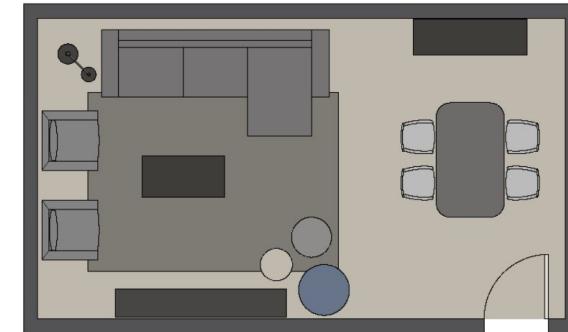

You have a rectangular shape living and dining space that can easily get a good quality layout. However, the dimensions of the room are a little small to meet all the expectations. In this situation, it may get harder to make a perfect floor plan. With this design, you will get maximum efficiency from your room.

First of all, your main expectation from the room was get a spacious and minimalist living and dining area to enjoy with your pets. With this L shape comfy sofa you can relax and play with your pets. Also, the fabric of the sofa is special for pets and it can be more useful for your situation.

The dining area was previously in front of the window and the sitting area was cramped because of the room shape. After changing the location of the table, and sitting area looks spacious and get more natural light from the window. With adding a carpet, the sitting area looks more cozy and the colors are combined. As for the sitting area, the TV unit was placed on the wall away from the windows. The fact that there is no window in front of the TV and it receives the light from the side will increase the viewing and game quality. The design of the rectangular shaped coffee table is elegant and make the space more stylish. Finally, thanks to the floor lamp that placed next to the seating area, the quality of working and reading on the sofa will also increase.

Additional Tips

- You can paint all the walls in a light color such as white that will make the space look spacious.
- You can change the window sills colour with dark colours to add a unique atmosphere to the space.
